# Creating Boundaries from Coverage

1 With quality machine and implement measurements, record your headland passes or the whole field as normal.

2 When complete go to Menu > Applications > Fields and Boundaries
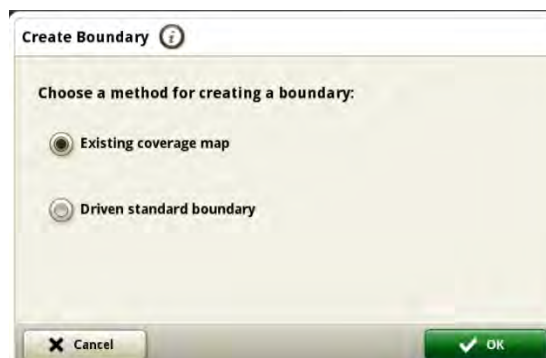

3 Verify Client Farm and Field Information

4 When you have the correct Client, Farm and Field, select "Create Boundaries"
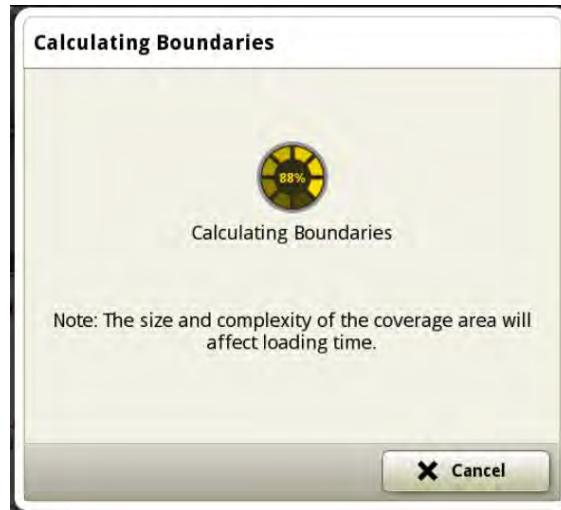

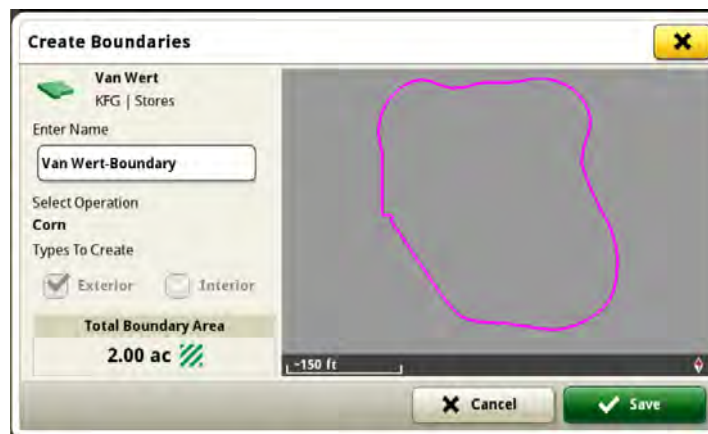

5 Select "Existing Coverage Map"

6 The display will generate the boundary based on your coverage.

For further assistance please contact your local KFG location or your account manager.

7 A preview of your boundary will appear.

8 Edit the name. Include the date, operation and signal used. This will help you select the correct boundary in the future.

9 Select "Save" when complete

10 Your boundary will now appear with the field information. Export like normal or utilize Data Sync to send to

your other connected Gen 4 displays.

Test Plot-Boundary

■ Exterior

11 Use Land in Operations Center to make minor adjustments such a cleaning up corners and taking out curves next to telephone poles.
